In lesson we are going to discover how arc length and radians help us to find velocity, and how our well loved formula of Distance equals Rate times Time helps us to find both Linear and Angular Velocity. We will create a few useful and easy to use formulas, and see how they are all related.

Angular and Linear Velocity - (Explained with 4 Terrific ...

Linear and angular velocity can be one of the trickier units for high school math students. The formulas and computations themselves aren't all that imposing, mostly just some quick multiplications and divisions, but the vocabulary and scenarios can be intimidating. We encounter some new terms here and their symbols, like angular velocity (ω), arc length (s), linear velocity (v) and using ...
