Neuroscience is the scientific study of the nervous system. It is a multidisciplinary science that combines physiology, anatomy, molecular biology, developmental biology, cytology, computer science and mathematical modeling to understand the fundamental and emergent properties of neurons, glia and neural circuits. The understanding of the biological basis of learning, memory, behavior ...

Neuroanatomy is the study of the structure and organization of the nervous system. In contrast to animals with radial symmetry, whose nervous system consists of a distributed network of cells, animals with bilateral symmetry have segregated, defined nervous systems. Their neuroanatomy is therefore better understood. In vertebrates, the nervous system is segregated into the internal structure of ...

Intracerebral administration of CRF has been shown to elicit anxious-like behavior in rats. 107 More recent pre-clinical studies suggest that CRF and its receptors play a pivotal, integrative role in the stress response and anxiety-related behaviors. 108,109 There are two major CRF systems in the brain: the neuroendocrine system in the PVN, and ...

Cognitive Neuroscience of ADHD. ADHD patients have deficits in higher-level cognitive functions necessary for mature adult goal-

directed behaviors, in so-called “executive functions” (EFs), that are mediated by late developing fronto-striato-parietal and fronto-cerebellar networks (Rubia, 2013). The most consistent deficits are in so-called “cool” EF such as motor response inhibition ...

Neuroscience: Overview, history, major branches

The cognition group uses the tools of modern neuroscience (genetic, molecular, physiology and imaging) to study the neural circuitry that underlies attention, memory, and decision-making. Researchers also study cognitive disorders, defining the genetic basis of diseases like autism and schizophrenia and identifying the neural circuits that are ...

Introduction. Stress is recognized as an important issue in basic and clinical neuroscience research (de Kloet et al., 2005a; McEwen et al., 2015). Although this physiological phenomenon is fundamental to survival, it is also strongly related to several brain disorders including, depression, anxiety, post-traumatic stress disorder (Ruiz et al., 2007; Heim et al., 2008; Martin et al., 2009 ...
