The most I've ever seen on a 1969 final was on a Cobra 148F-GTL on sideband and it was an effort for it to make 22 watts. Now if you want to talk about a 1307 driven by a 1306, which will swap out to the 2000-GTL, 148 and 148F-GTL and the Grants. Those two transistors will drive more power. This is one mod. I've not seen in the Grant-XL mods.

Although the FCC limits CB radios to a standard 4 Watts of power, there is an exception. If you want the best range, you may want a radio with single sideband (SSB) capability. SSB radios, such as the Cobra 148 GTL transmit at approximately 12 Watts, or three times the normal power. The potential drawback is that the receiver must also have an SSB radio.
