In statistics and probability theory, the median is the value separating the higher half from the lower half of a data sample, a population, or a probability distribution. For a data set, it may be thought of as "the middle" value. The basic feature of the median in describing data compared to the mean (often simply described as the "average") is that it is not skewed by a small proportion of ...

These various, well-understood principles suggest that there should, in consequence, be universal patterns in trait–environment relationships (Yang et al., 2019). To test this proposition, and the degree to which trait responses to environment are similar or different among and within species, requires the analysis of extensive leaf-trait data on multiple environmental gradients.
