Why do plants give us fruit?

Life cycle. Hydrangea flowers are produced from early spring to late autumn; they grow in flowerheads (corymbs or panicles) most often at the ends of the stems. Typically the flowerheads contain two types of flowers: small non-showy flowers in the center or interior of the flowerhead, and large, showy flowers with large colorful sepals (tepals).

Hydrangea - Wikipedia

Well, the answer lies in their respective life cycles. "Life cycle" means the amount of time it takes a plant to grow from seed and end up, finally, bearing seeds of its own. Botanically speaking, annual plants complete their life cycle within one growing season (typically, from spring to fall):
