The next rung on the ladder is projective geometry. It is generated by the group of projective collineations. A collineation is an automorphism that maps lines onto lines. If points A, B, and C are connected by a single line, then the projections of those points will also be connected by a single line.

L'ombre est la zone sombre que crée l'interposition d'un objet opaque entre une source de lumière et une surface qu'elle éclaire. Elle se voit comme une silhouette sans épaisseur... L'ombre propre d'un objet est la partie que la lumière principale n'atteint pas en plein, et qui est donc plus sombre. L'ombre portée est la partie d'un autre objet que celui qui fait écran prive de lumière.

The x86 instruction set architecture is at the heart of CPUs that power our home computers and remote servers for over two decades. Being able to read and write code in low-level assembly language is a powerful skill to have. It enables you to write faster code, use machine features unavailable in C, and reverse-engineer compiled code.
